

# SENSE OF SCALE

In *Sense of scale* the microstructure of Ultra High Performance Concrete is scaled in such a way that an architectonic wall is created. The optimization of the material matrix guarantees a very strong structure, which makes it possible to use the concrete in slender designs. Extremely porous structures can be made, without losing load-bearing capacities. The wall forms a tactile and complex three-dimensional veil and creates an ambivalent relation between spaces: concealing and revealing while retaining a physical connection. By enlarging the concrete microstructure not just its characteristics remain, but also new qualities arise: the implicit structure becomes explicit.
